Yes — this is a **Vercel account verification issue**, not a problem with your portfolio code or GitHub repository.

Vercel's current recovery page specifically says it is used for **sign-up issues and account verification/recovery**. Vercel

What to do now

Use the recovery form Vercel gave you:

Vercel Account Recovery & Appeals ↗

Fill it out with the information associated with your Vercel account. Vercel says missing or incorrect information can delay the review. Vercel

Don't create another Vercel account yet. It's better to resolve the verification on this account, especially since your GitHub repository is already prepared.

If Vercel offers another sign-in method

There is also a newer self-service recovery flow for eligible accounts:

1. Go to Vercel login.
2. Choose **email + one-time password (OTP)**.
3. Choose **Use another sign-in method**.
4. If available, verify using the GitHub/GitLab/Bitbucket account previously connected to Vercel.
5. Follow the remaining recovery steps. Vercel Community +1

Don't worry about your project

Your work is safe:

```
GitHub
  ☑ my-portfolio

Neon
  ☑ PostgreSQL database
  ☑ migrated data

Local
  ☑ working portfolio
  ☑ chatbot
```

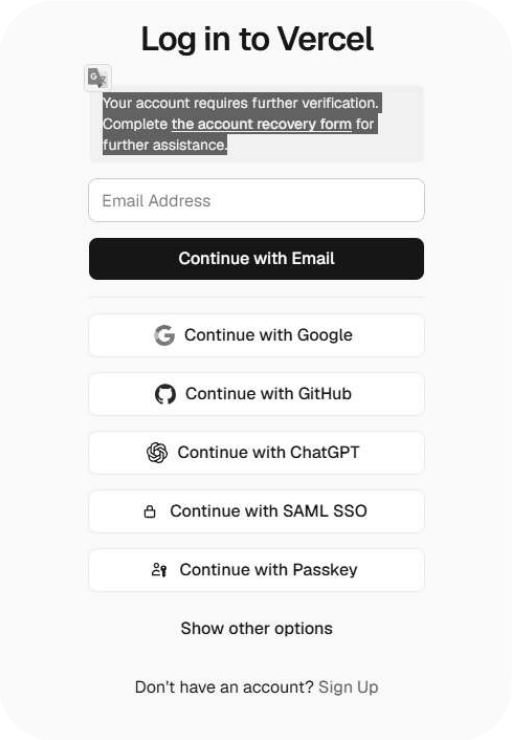

```
  ☑ production build

Vercel
  ⏳ account verification
```

So **we don't need to change any code right now**.

Once Vercel approves the account, we'll continue exactly where we stopped: **Import** `my-portfolio` **→ add the four environment variables → deploy → test the live site.** 🚀

If Vercel gives you a new verification/recovery message, paste it here and I'll guide you through it.

Yes, I can see the screenshot. The message is clear:

> **"Your account requires further verification. Complete the account recovery form for further assistance."**

This means **Vercel is blocking your account before you can reach the dashboard**. Your GitHub repository and portfolio deployment are not the issue.

What you should do

Don't keep trying the login buttons repeatedly. Instead, use the **Account Recovery Form** shown in the red message.

Vercel account recovery form ↗

When the form asks about the problem, select the option related to **account verification**.

Important

You don't need to:

- create another GitHub repository
- change your portfolio code
- change Neon
- regenerate your database
- change your OpenRouter key
- create another Vercel account

Your current status is:

```
GitHub          ☑
Portfolio code  ☑
Neon PostgreSQL ☑
Database data   ☑
OpenRouter      ☑
Vercel account  ⛔ Verification required
```

Once Vercel clears the account, we'll continue from **Import GitHub repository → Environment Variables → Deploy**.

If the recovery form shows you a question or an error you aren't sure how to answer, **send me a screenshot of that page**, and I'll walk you through it.

when i pressed :continue with google. result is the same. what's the matter?

Yes — that actually tells us something important.

If **"Continue with Google" produces exactly the same verification message**, then the problem is **not your Google login**. Vercel is applying the verification restriction to the **Vercel account itself**, after the authentication method is selected.

Vercel staff confirm that account-verification/recovery cases are handled by their specialized account team and require an ownership-verification process. Vercel Community +1

What I recommend now

Don't keep trying Google, GitHub, or email repeatedly. They are unlikely to bypass this particular restriction.

Use the official recovery form:

Vercel Account Recovery ↗

When you submit it:

1. Use the **same email address associated with your Vercel account**.
2. Explain that you cannot access the account because Vercel displays:

   > "Your account requires further verification."

3. Mention that **Google, GitHub, and email login all lead to the same verification message**.
4. Explain that you're trying to deploy your GitHub repository `my-portfolio`.
5. Keep the request focused on **account verification/access**.

Vercel's own staff specifically recommend the recovery form for this situation rather than trying to resolve it through normal login. Vercel Community

There is one other thing worth trying

Vercel currently has a **self-service recovery flow for some accounts**:

1. Go to Vercel login.
2. Choose **email + one-time password (OTP)**.
3. Choose **Use another sign-in method**.
4. If Vercel offers it, select the previously connected **GitHub/GitLab/Bitbucket account** for identity verification.
5. Follow the recovery prompts.

This flow is only available to eligible accounts, so you may not see it. Vercel Community +1

Most importantly

Your portfolio isn't lost. We have:

```
GitHub repository      ✅
Neon PostgreSQL        ✅
Migrated portfolio data ✅
Local portfolio        ✅
Chatbot                ✅
Production build       ✅
Vercel account         ⏳ verification
```

So **don't change your project or database while waiting for Vercel**.

If the recovery form gives you a **case number or a response**, send me the message (hide your email/private information), and I'll tell you what to do next.
